

SMART Control – Alerts

Safer schools with SMART displays

SMART Control – Alerts integrates SMART displays with the Common Alerting Protocol (CAP) to deliver emergency alert and warning messages. During critical events, such as fires, or active shooter situations, the display overrides content on screen to display the alert message, augmenting the school’s mass alert communication system.

Functionality at no cost

SMART Control – Alerts integrates seamlessly with your existing emergency alert systems. No additional software, accessory, or license purchase required.

Safety for all

SMART Control – Alerts extends alerts communication to displays, ensuring visual learners and hearing-impaired users have equally fast access to critical information.

Fast, flexible deployment

IT admins can connect SMART devices to the school’s existing alerts system in few short clicks. Displays can also be custom-grouped to deliver targeted alert messages.

Value that lasts

SMART Control – Alerts continues SMART’s commitment to post-purchase value and is included with both new and legacy SMART display purchases*.

SMART Control – Alerts integrates with:
